

PROBLEM

Structural defects

Weak structures

Redundant voids

Oxford Hydrotechnics have experience in a wide range of repair projects including: concrete repairs, crack repairs, repair of de-bonded floors and screeds, tanking, structural joint repair, structural strengthening, void filling, bearing repair & replacement, as well as control of water ingress and the stabilisation of mobile ground.

SOLUTION

Bespoke processes

Innovative techniques

Efficient installation

Oxford Hydrotechnics are able to utilise industry standard and “best practice” repair skills, alongside advanced resin injection techniques, to engineer solutions, often in highly problematic scenarios.

Our resins are able to repair defects at a much finer diameter than traditional, cementitious alternatives, giving us a broader spectrum of potential repair techniques at our disposal.

RESULT

Proven

Effective

Reliable

All of our repair proposals are based on what we believe will be the most successful product for the specific project. We adapt our proposals based on the required results and many of our repair techniques are useable in locations where cementitious or grout alternatives would be impossible to install.

If you're interested in our techniques, give us a call on 01869 346001 and have a chat with one of our engineers. If you'd like us to come to your offices to explain how our processes work, let us know!
